
History re-created with Lego at Beth El Temple - News

About 200 students from the Beth El Temple Religious School learned about the architecture and history of Jerusalem in a very unusual way.

Under the direction of architect Stephen Schwartz, AIA, of Building Blocks Workshops, they used 60,000 Legos to re-create a 400-square-foot model of the old city's ancient walls, the Temple Mount with the Beit haMikdash, the Tower of David, and Montefiore's Windmill, as well as many landmark buildings inside the walls.
